Table N.3F-1. Summary of Noise Analysis – Preferred South Crossing Alternative (DUW-1a)

Receiver Area	King County Parcel Number	Sound Transit Right-of-Way ID	Track Station Number	Receiver Street Address	Receiver Land Use Type <sup>a</sup>	Number of Units Represented	Existing Noise Level (Ldn/Leq, dBA) <sup>b</sup>	Distance from Track to Building (feet) <sup>c</sup>	Noise from Light Rail Operations (Ldn/Leq, dBA) <sup>d</sup>	Noise Metric Type (Ldn for residences, Leq for others)	FTA Moderate Impact Criteria	FTA Severe Impact Criteria	Number of Moderate Impacts	Number of Severe Impacts	Sound Wall Side of Track Way and Height	Special Trackwork Recommended	Recommended for Sound Insulation	Light Rail Noise with Mitigation
Duwamish Area: Firestation 14	7674800085	WS10046	175.5	3224 4th Avenue South	SF	1	70	105	70	Ldn	65	70	0	1	West Side at 4 feet	Yes	No	60
Duwamish Area: West Side of 19th Avenue Southwest along Southwest Charlestown Street	7547300775	WS5607	255	3826 18th Avenue Southwest	SF	1	55	456	60	Ldn	56	62	1	0	East Side at 4 feet	No	No	49
Duwamish Area: West Side of 19th Avenue Southwest along Southwest Charlestown Street	7547300940	WS5616	254	3823 17th Avenue Southwest	SF	1	58	401	61	Ldn	57	63	1	0	East Side at 4 feet	No	No	51
Duwamish Area: West Side of 19th Avenue Southwest along Southwest Charlestown Street	7547300935	WS5615	254	3825 17th Avenue Southwest	MF	2	58	418	58	Ldn	57	63	2	0	East Side at 4 feet	No	No	48
Duwamish Area: West Side of 19th Avenue Southwest along Southwest Charlestown Street	7547300930	WS5614	254	3827 17th Avenue Southwest	SF	1	58	444	57	Ldn	57	63	1	0	East Side at 4 feet	No	No	46
Duwamish Area: West Side of 19th Avenue Southwest along Southwest Charlestown Street	7547300920	WS7817	254	3831 17th Avenue Southwest	MF	2	58	480	56	Ldn	57	63	0	0	East Side at 4 feet	No	No	45
Duwamish Area: West Side of 20th Avenue Southwest along Southwest Charlestown Street	9349900110	WS5586	260	3706 20th Avenue Southwest	SF	1	75	98	61	Ldn	66	74	0	0	None	No	No	61
Duwamish Area: West Side of 19th Avenue Southwest along Southwest Charlestown Street	9349900115	WS5585	260	3708 20th Avenue Southwest	SF	1	75	123	57	Ldn	66	74	0	0	None	No	No	57

Receiver Area	King County Parcel Number	Sound Transit Right-of-Way ID	Track Station Number	Receiver Street Address	Receiver Land Use Type <sup>a</sup>	Number of Units Represented	Existing Noise Level (Ldn/Leq, dBA) <sup>b</sup>	Distance from Track to Building (feet) <sup>c</sup>	Noise from Light Rail Operations (Ldn/Leq, dBA) <sup>d</sup>	Noise Metric Type (Ldn for residences, Leq for others)	FTA Moderate Impact Criteria	FTA Severe Impact Criteria	Number of Moderate Impacts	Number of Severe Impacts	Sound Wall Side of Track Way and Height	Special Trackwork Recommended	Recommended for Sound Insulation	Light Rail Noise with Mitigation
Duwamish Area: West Side of 19th Avenue Southwest along Southwest Charlestown Street	9349900120	WS5584	260	3710 20th Avenue Southwest	SF	1	70	146	55	Ldn	65	70	0	0	None	No	No	55

Table Notes

Note: If a property/receiver is not listed, it is either outside of the study area or it would be displaced by this alternative.

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = day-night sound level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = equivalent sound level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

<sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.

<sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.

<sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions depending on land use type.

<sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

Table N.3F-2. Summary of Noise Analysis – Preferred South Crossing (DUW-1a) when Connecting to the Delridge Way Station Alternative (DEL-3)

Receiver Area	King County Parcel Number	Sound Transit Right-of-Way ID	Track Station Number	Receiver Street Address	Receiver Land Use Type <sup>a</sup>	Number of Units Represented	Existing Noise Level (Ldn/Leq, dBA) <sup>b</sup>	Distance from Track to Building (feet) <sup>c</sup>	Noise from Light Rail Operations (Ldn/Leq, dBA) <sup>d</sup>	Noise Metric Type (Ldn for residences, Leq for others)	FTA Moderate Impact Criteria	FTA Severe Impact Criteria	Number of Moderate Impacts	Number of Severe Impacts	Sound Wall Side of Track Way and Height	Special Trackwork Recommended	Recommended for Sound Insulation	Light Rail Noise with Mitigation

Table Notes

Note: If a property/receiver is not listed, it is either outside of the study area or it would be displaced by this alternative.

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = day-night sound level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = equivalent sound level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

<sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.

<sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.

<sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions depending on land use type.

<sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

Table N.3F-3. Summary of Noise Analysis – Preferred South Crossing Alternative (DUW-1a) when Connecting to the Delridge Way Station Lower Height Alternative (DEL-4)

Receiver Area	King County Parcel Number	Sound Transit Right-of-Way ID	Track Station Number	Receiver Street Address	Receiver Land Use Type <sup>a</sup>	Number of Units Represented	Existing Noise Level (Ldn/Leq, dBA) <sup>b</sup>	Distance from Track to Building (feet) <sup>c</sup>	Noise from Light Rail Operations (Ldn/Leq, dBA) <sup>d</sup>	Noise Metric Type (Ldn for residences, Leq for others)	FTA Moderate Impact Criteria	FTA Severe Impact Criteria	Number of Moderate Impacts	Number of Severe Impacts	Sound Wall Side of Track Way and Height	Special Trackwork Recommended	Recommended for Sound Insulation	Light Rail Noise with Mitigation

Table Notes

Note: If a property/receiver is not listed, it is either outside of the study area or it would be displaced by this alternative.

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = day-night sound level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = equivalent sound level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

<sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.

<sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.

<sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions depending on land use type.

<sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

Table N.3F-4. Preferred South Crossing (DUW-1a) when Connecting to the Andover Street Station Alternative (DEL-5)

Table Notes

Note: If a property/receiver is not listed, it is either outside of the study area or it would be displaced by this alternative.

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = day-night sound level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = equivalent sound level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

<sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.

<sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.

<sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions depending on land use type.

<sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

Table N.3F-5. Preferred South Crossing (DUW-1a) when Connecting to the Andover Street Station (Lower Height) Alternative (DEL-6a)

Table Notes

Note: If a property/receiver is not listed, it is either outside of the study area or it would be displaced by this alternative.

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = day-night sound level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = equivalent sound level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

<sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.

<sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.

<sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions depending on land use type.

<sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

Table N.3F-6. Summary of Noise Analysis – South Edge Crossing Alignment Option (DUW-1b)

Table Notes

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = Day-Night Sound Level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = Equivalent Sound Level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

ROW = Right of Way

- <sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.
- <sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.
- <sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions, depending on land use type.
- <sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

Table Notes

Note: If a property/receiver is not listed, it is either outside of the study area or it would be displaced by this alternative.

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = day-night sound level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = equivalent sound level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

<sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.

<sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.

<sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions depending on land use type.

<sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

Table N.3F-9. Summary of Noise Analysis – Dakota Street Station Alternative (DEL-1a) when Connecting to the North Crossing Alternative (DUW-2)

Table Notes

Note: If a property/receiver is not listed, it is either outside of the study area or it would be displaced by this alternative.

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = day-night sound level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = equivalent sound level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

<sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.

<sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.

<sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions depending on land use type.

<sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

Table N.3F-10. Summary of Noise Analysis – Dakota Street Station North Alignment Option (DEL-1b)

## Table Notes

Note: If a property/receiver is not listed, it is either outside of the study area or it would be displaced by this alternative.

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = day-night sound level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = equivalent sound level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

<sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.

<sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.

<sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions depending on land use type.

<sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

Table N.3F-11. Summary of Noise Analysis – Dakota Street Station Lower Height Alternative (DEL-2a)

Table Notes

Note: If a property/receiver is not listed, it is either outside of the study area or it would be displaced by this alternative.

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = day-night sound level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = equivalent sound level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

<sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.

<sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.

<sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions depending on land use type.

<sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

Table N.3F-12. Summary of Noise Analysis – Dakota Street Station Lower Height North Alignment Option (DEL-2b)

Table Notes

Note: If a property/receiver is not listed, it is either outside of the study area or it would be displaced by this alternative.

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = day-night sound level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = equivalent sound level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

<sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.

<sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.

<sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions depending on land use type.

<sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

Table N.3F-13. Summary of Noise Analysis – Delridge Way Station Alternative (DEL-3)

Table Notes

Note: If a property/receiver is not listed, it is either outside of the study area or it would be displaced by this alternative.

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = day-night sound level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = equivalent sound level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

<sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.

<sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.

<sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions depending on land use type.

<sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

Table N.3F-14. Summary of Noise Analysis – Delridge Way Station Lower Height Alternative (DEL-4)

Table Notes

Note: If a property/receiver is not listed, it is either outside of the study area or it would be displaced by this alternative.

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = day-night sound level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = equivalent sound level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

<sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.

<sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.

<sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions depending on land use type.

<sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

Table Notes

Note: If a property/receiver is not listed, it is either outside of the study area or it would be displaced by this alternative.

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = day-night sound level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = equivalent sound level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

<sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.

<sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.

<sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions depending on land use type.

<sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

Table N.3F-16. Summary of Noise Analysis – Andover Street Station Lower Height Alternative (DEL-6a)

Receiver Area	King County Parcel Number	Sound Transit Right-of-Way ID	Track Station Number	Receiver Street Address	Receiver Land Use Type <sup>a</sup>	Number of Units Represented	Existing Noise Level (Ldn/Leq, dBA) <sup>b</sup>	Distance from Track to Building (feet) <sup>c</sup>	Noise from Light Rail Operations (Ldn/Leq, dBA) <sup>d</sup>	Noise Metric Type (Ldn for residences, Leq for others)	FTA Moderate Impact Criteria	FTA Severe Impact Criteria	Number of Moderate Impacts	Number of Severe Impacts	Sound Wall Side of Track Way and Height	Special Trackwork Recommended	Recommended for Sound Insulation	Light Rail Noise with Mitigation
Duwamish Area: West Side of 22nd Avenue and north of Southwest Andover Street	2848700160	WS5484	271.5	3816 23rd Avenue Southwest	MF	2	69	235	62	Ldn	64	70	0	0	East Side at 4 feet	No	No	53

Table Notes

Note: If a property/receiver is not listed, it is either outside of the study area or it would be displaced by this alternative.

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = day-night sound level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = equivalent sound level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

<sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.

<sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.

<sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions depending on land use type.

<sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

Table N.3F-17. Summary of Noise Analysis – Preferred Andover Street Station Lower Height South Alignment Option (DEL-6b)

Table Notes

Note: If a property/receiver is not listed, it is either outside of the study area or it would be displaced by this alternative.

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = day-night sound level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = equivalent sound level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

<sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.

<sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.

<sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions depending on land use type.

<sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

Table N.3F-18. Summary of Noise Analysis – Andover Street Station Lower Height No Avalon Tunnel Connection (DEL-7)

Table Notes

Note: If a property/receiver is not listed, it is either outside of the study area or it would be displaced by this alternative.

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = day-night sound level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = equivalent sound level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

<sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.

<sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.

<sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions depending on land use type.

<sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

Table N.3F-19. Summary of Noise Analysis – Elevated 41st/42nd Avenue Station Alternative (WSJ-1)

Table Notes

Note: If a property/receiver is not listed, it is either outside of the study area or it would be displaced by this alternative.

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = day-night sound level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = equivalent sound level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

<sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.

<sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.

<sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions depending on land use type.

<sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

Table N.3F-20. Summary of Noise Analysis – Elevated Fautleroy Way Station Alternative (WSJ-2)

Table Notes

Note: If a property/receiver is not listed, it is either outside of the study area or it would be displaced by this alternative.

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = day-night sound level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = equivalent sound level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

<sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.

<sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.

<sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions depending on land use type.

<sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

Table N.3F-21. Summary of Noise Analysis – Elevated Fautleroy Way Station Alternative (WSJ-2) when Connecting to the Dakota Street Station, North Alignment Option (DEL-1b)

## Table Notes

Note: If a property/receiver is not listed, it is either outside of the study area or it would be displaced by this alternative.

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = day-night sound level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = equivalent sound level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

<sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.

<sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.

<sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions depending on land use type.

<sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

Table N.3F-22. Summary of Noise Analysis – Elevated Fountleroy Way Station Alternative (WSJ-2) when Connecting to the Andover Street Station Alternative (DEL-5)

Table Notes

Note: If a property/receiver is not listed, it is either outside of the study area or it would be displaced by this alternative.

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = day-night sound level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = equivalent sound level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

<sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.

<sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.

<sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions depending on land use type.

<sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

**Table N.3F-23. Summary of Noise Analysis – Tunnel 41st Avenue Station (WSJ-3a)**

Receiver Area	King County Parcel Number	Sound Transit Right-of-Way ID	Track Station Number	Receiver Street Address	Receiver Land Use Type <sup>a</sup>	Number of Units Represented	Existing Noise Level (Ldn/Leq, dBA) <sup>b</sup>	Distance from Track to Building (feet) <sup>c</sup>	Noise from Light Rail Operations (Ldn/Leq, dBA) <sup>d</sup>	Noise Metric Type (Ldn for residences, Leq for others)	FTA Moderate Impact Criteria	FTA Severe Impact Criteria	Number of Moderate Impacts	Number of Severe Impacts	Sound Wall Side of Track Way and Height	Special Trackwork Recommended	Recommended for Sound Insulation	Light Rail Noise with Mitigation
The Tunnel 41st Avenue Station Alternative (WSJ-3a) is entirely in a tunnel and therefore no noise analysis was performed.																		

Table Notes

Table Notes

Note: If a property/receiver is not listed, it is either outside of the study area or it would be displaced by this alternative.

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = day-night sound level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = equivalent sound level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

<sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.

<sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.

<sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions depending on land use type.

<sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

Table N.3F-26. Summary of Noise Analysis - Medium Tunnel 41st Avenue Station Alternative (WSJ-5a)

Receiver Area	King County Parcel Number	Sound Transit Right-of-Way ID	Track Station Number	Receiver Street Address	Receiver Land Use Type <sup>a</sup>	Number of Units Represented	Existing Noise Level (Ldn/Leq, dBA) <sup>b</sup>	Distance from Track to Building (feet) <sup>c</sup>	Noise from Light Rail Operations (Ldn/Leq, dBA) <sup>d</sup>	Noise Metric Type (Ldn for residences, Leq for others)	FTA Moderate Impact Criteria	FTA Severe Impact Criteria	Number of Moderate Impacts	Number of Severe Impacts	Sound Wall Side of Track Way and Height	Special Trackwork Recommended	Recommended for Sound Insulation	Light Rail Noise with Mitigation
Delridge Area: Between West Side Seattle Bridge and 34th Avenue Southwest	9297301490	WS5177	307	4121 Fountleroy Way Southwest	SF	1	73	171	61	Ldn	66	72	0	0	None	No	No	61

Table Notes

Note: If a property/receiver is not listed, it is either outside of the study area or it would be displaced by this alternative.

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = day-night sound level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = equivalent sound level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

<sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.

<sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.

<sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions depending on land use type.

<sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

Table Notes

Note: If a property/receiver is not listed, it is either outside of the study area or it would be displaced by this alternative.

dBA = A-weighted decibels

FTA = Federal Transit Administration

Ldn = day-night sound level. Primarily for buildings with nighttime noise sensitivity, including residences, hotels, hospitals, and fire stations with sleeping areas.

Leq = equivalent sound level. Primarily for daytime use buildings, including schools, libraries, and day care centers.

<sup>a</sup> Land use categories are based on existing ambient levels and the FTA Transit Noise and Vibration Impact Assessment Manual categories. CH = Church, MF = Multi-Family Residence, PK = Park, REC = Recording Studio, SC = School, SF = Single-Family Residence, U = Undeveloped.

<sup>b</sup> The existing Leq and/or the Ldn before light rail construction and operations.

<sup>c</sup> Measured in feet from the closest point of the building to the light rail track. For larger buildings there can be multiple analysis positions depending on land use type.

<sup>d</sup> The predicted noise levels from the operation of the light rail system, including bells at stations and trackwork. This is the modeled project noise based on all the factors (such as track and frequency), which is then compared to FTA criteria to determine whether there would be an impact. If there were an impact, proposed mitigation and resulting project noise level after mitigation would be provided.

**Table N.3F-28. Summary of Noise Analysis – No Avalon Station Tunnel (WSJ-6)**

Receiver Area	King County Parcel Number	Sound Transit Right-of-Way ID	Track Station Number	Receiver Street Address	Receiver Land Use Type <sup>a</sup>	Number of Units Represented	Existing Noise Level (Ldn/Leq, dBA) <sup>b</sup>	Distance from Track to Building (feet) <sup>c</sup>	Noise from Light Rail Operations (Ldn/Leq, dBA) <sup>d</sup>	Noise Metric Type (Ldn for residences, Leq for others)	FTA Moderate Impact Criteria	FTA Severe Impact Criteria	Number of Moderate Impacts	Number of Severe Impacts	Sound Wall Side of Track Way and Height	Special Trackwork Recommended	Recommended for Sound Insulation	Light Rail Noise with Mitigation
The No Avalon Station Tunnel (WSJ-6) is entirely in a tunnel and therefore no noise analysis was performed.																		

Table Notes
